## TECHNICAL INFORMATION ADDENDUM FOR BUNKHOUSE PLANK®

Before finishing, fill any holes that would be a safety hazard. (See our “Technical Information” for ‘Filling Holes & Cracks’)

The only difference in finishing this product (compared to our other floors) lies in the sanding procedure, hence the references to our existing information. After installation (see our “Technical Information” sheet for ‘Acclimation’ and ‘Installation’ information) burnish with a pad and hardplate. This should only knock the “high spots” off of the circular sawcut marks and ease the overwood, i.e. the variations in height between planks. In order to achieve the texture of this floor we do not plane the face. The resulting overwood is part of the rustic appeal.
