## **Aged Woods® Intros LEED-Compliant “Rescued Maple™”**

**For Immediate Release** – Aged Woods, Inc, a leading supplier of reclaimed, remilled antique wood flooring under the brand name Aged Woods®, has announced the launch of its new Rescued Maple™ collection of strip maple flooring. Removed from old factories and warehouses, Rescued Maple™ has been refurbished

to produce an attractive, LEED-compliant hardwood flooring option with a face-width ranging from 2” to 2-1/2”. Aged Woods has removed layers of finish and dirt accumulated over decades, then pre-finished Rescued Maple™ for a light-colored, highly reflective hardwood flooring product ideal for retail environments or other daylight strategy settings.

The rich and unique character of reclaimed hardwood floors are prized by architects, designers, specifiers and homeowners in projects seeking LEED certification. Aged Woods® branded Rescued Maple™ can contribute points or credits for LEED projects under the category of Materials & Resources Credit 3 – Reclaimed Materials, as well as Materials & Resources Credit 7 – Regional Materials, for most projects in the Mid-Atlantic region. In addition, Aged Woods branded hardwood flooring, including its new cost-effective Rescued Maple™ product, can contribute to a LEED scorecard for building projects in Knoxville, Louisville, Indianapolis, Detroit and Buffalo.

**(Pictured Above:** Character Grade Rescued Maple™, please note Select Grades are also available.)

Aged Woods® brand flooring is precision-milled from reclaimed wood that has been diverted from the deconstruction waste stream and the inevitable landfill. Proper kiln-

drying before milling assures stable, bug-free floor. The look of Aged Woods® flooring is natural, offering authentic rustic character from a century or two of weathering and/or use and signs of old-time craftsmen. The use of Aged Woods® products can help achieve certification under any of the LEED Green Building Rating Systems involving interior building materials.
